Overview

Type	General Social Survey
Identification	gss-89M0034-E-2015-c-29-episode
Version	Production Date: 2018-07-19 Version 3
Series	The two primary objectives of the General Social Survey (GSS) are: to gather data on social trends in order to monitor changes in the living conditions and well-being of Canadians over time; and to provide information on specific social policy issues of current or emerging interest.

Abstract

This survey monitors changes in time use to better understand how Canadians spend and manage their time and what contributes to their well-being and stress. The data collected provides information to all level of governments when making funding decisions, developing priorities and identifying areas of concern for legislation, new policies and programs. Researchers and other users use this information to inform the general Canadian population about the changing nature of time use in Canada such as: o Are we working too many hours and spending too much time commuting? o Do we have flexible work schedules? o Do we have enough time to play sports, participate in leisure activities or volunteer? o Are we spending enough quality time with our children, our families and our friends? o How has the internet and social media affected the way we spend our time? o Are we satisfied with our lives?

Kind of Data	Survey data
Unit of Analysis	Individuals

Scope & Coverage

Keywords	Disability, Dwelling, neighbourhood and community, Education, Immigration, Main activity, Perception of time, Religion, Self related health, Self related and main stress, Sexual orientation, Subjective well being, Time use diary, Unpaid work, Work family responsibilities, Work life balance
Topics	Time use
Time Period(s)	2015-2016
Countries	Canada

Geographic Coverage

Canada, Provinces, Census Metropolitan Areas

Universe

The target population for the Cycle 29 GSS included all persons 15 years of age and older in Canada, excluding: 1. Residents of the Yukon, Northwest Territories, and Nunavut; 2. Full-time residents of institutions.

Other Producer(s)	Social and Aboriginal Statistics Division (SASD) , Statistics Canada

Sampling

Sampling Procedure

In order to carry out sampling, each of the ten provinces was divided into strata (i.e. - geographic areas). Many of the Census Metropolitan Areas (CMAs) were each considered separate strata. This was the case for St. John's, Halifax, Saint John, Montreal, Quebec City, Toronto, Ottawa, Hamilton, Winnipeg, Regina, Saskatoon, Calgary, Edmonton and Vancouver. All CMAs not on this list are located in Quebec, Ontario and British Columbia, with the exception of Moncton. Three more strata were formed by grouping the remaining CMAs (except Moncton) in each of Quebec, Ontario and British Columbia. Finally, the non-CMA areas of each of the ten provinces were also grouped to form ten more strata, for a total of 27 strata. Moncton was added to the non-CMA stratum for New Brunswick.

The survey frame was created using two different components: - Lists of telephone numbers in use (both landline and cellular) available to Statistics Canada from various sources (Telephone companies, Census of population, etc.); - The Address Register (AR): List of all dwellings within the ten provinces. The Address Register (AR) was used to group together all telephone numbers associated with the same valid address. About 87% of telephone numbers available were linked to the AR. The records resulting from this linkage could possess more than one telephone number (grouped by the address). The other 13% of telephone numbers not linked to the AR were also included in the frame and each of them constitutes a single record. The combination of those two components results in the survey frame. The rationale for using all the telephone numbers (linked and not linked) was to ensure a good coverage of all households with telephone numbers. When more than one telephone number was attached to a record, they were sorted by source and by type of telephone number. The first telephone number was considered the best telephone number available to reach the household. Please note that for the remaining sections of this document, the word "record" will refer to the grouping of telephone numbers that consists of our sampling unit on the survey frame.

In each frame, each record was assigned to a stratum within its province. A simple random sample without replacement of records was next selected in each stratum. The frame for GSS was created using several linked sources, such as the Census, administrative data and billing files. Coverage was improved (over coverage and under coverage may still exist) if we compare it to the random digit dialling strategies used in the past. All respondents in the ten provinces were rostered by telephone and interviewed by telephone or self-completed an electronic questionnaire. Households without telephones were therefore excluded from the survey population. Survey estimates were adjusted (weighted) to represent all persons in the target population, including those not covered by the survey frame. For the 2015 GSS on Time Use, 87.4% of the telephone numbers dialled reached eligible households. An attempt was then made to conduct an interview with one randomly selected person from each household. To be eligible, a household had to include at least one person 15 years of age or older. During collection, for the households not meeting the eligibility criteria, the interviews were terminated after an initial set of questions that established whether or not they met the criteria.

The target sample size (i.e. the number of respondents) for Cycle 29 Time Use was 22,000 while the actual number of respondents was 17,390. For each province, minimum sample sizes were determined that would ensure certain estimates would have acceptable sampling variability at the stratum level. Once these stratum sample size targets had been met, the remaining sample was allocated to the strata in a way that balanced the need for precision of both national-level and stratum-level estimates.

Response Rate

The overall response rate was 38.2%. The response rate for the 2015 Cycle 29 GSS on Time Use and that of previous cycles are not directly comparable. The 2015 sample was selected using the new GSS frame, which necessitated some adjustments in the methodology used to calculate the response rate. The new frame includes "cell phone only" households, a population that was not covered with the previous RDD sample frame. Addition of "cell phone only" households to the frame was essential since this population constitutes a constantly growing portion of the population and coverage had been steadily declining with the previous frame. While, the addition of these households is necessary for coverage of the Canadian population, this population is harder to reach. Another factor that affects comparability of the response rate over time is the way in which status (in-scope, out-of-scope) is determined under the new design.

Weighting

When a probability sample is used, as was the case for the GSS, the principle behind estimation is that each person selected in the sample represents (in addition to himself/herself) several other persons not in the sample. For example, in a simple random sample of 2% of the population, each person in the sample represents 50 persons in the population (himself/herself and 49 others). The number of persons represented by a given respondent is usually known as the weight or weighting factor. GSS Cycle 29 is a survey of individuals and the analytic files contain questionnaire responses and associated information from the respondents. A weighting factor is available on the microdata file: WGHT_PER: This is the basic weighting factor for analysis at the person level, i.e. to calculate estimates of the number of persons (non-institutionalized and aged 15 or over)

having one or several given characteristics. In addition to the estimation weights, bootstrap weights have been created for the purpose of design-based variance estimation. Estimates based on the survey data are also adjusted (by weighting) so that they are representative of the target population with regard to certain characteristics (each month we have independent estimates for various age-sex groups by province). To the extent that the characteristics are correlated with those independent estimates, this adjustment can improve the precision of estimates.

Data Collection

Data Collection Dates	start 2015-04-07 end 2016-04-06
Time Period(s)	start 2015 end 2016
Data Collection Mode	Computer assisted telephone interviewing (CATI) and an electronic questionnaire were used to collect data for the 2015 GSS on Time Use. Respondents were interviewed in the official language of their choice. Proxy interviews were not permitted. All interviewing took place using centralized telephone facilities in five of Statistics Canada's regional offices, with calls being made from approximately 9:00 a.m. to 9:30 p.m. Mondays to Fridays. Interviewing was also scheduled from 10:00 a.m. to 5:00 p.m. on Saturdays and 1:00 p.m. to 9:00 p.m. on Sundays. The five regional offices were: Halifax, Sherbrooke, Sturgeon Falls, Winnipeg and Edmonton. Interviewers were trained by Statistics Canada staff in telephone interviewing techniques using CATI, as well as in survey concepts and procedures. All interviews were consolidated in Sherbrooke and Sturgeon Falls for the last two waves to facilitate collection management. Interviewers were instructed to make all reasonable attempts to obtain a completed interview with the randomly selected member of the household. Those who at first refused to participate were re-contacted up to two more times to explain the importance of the survey and to encourage their participation. For cases in which the timing of the interviewer's call was inconvenient, an appointment was arranged to call back at a more convenient time. For cases in which there was no one home, numerous call backs were made. Interviewer manuals are not included in this documentation package but can be made available by contacting Statistics Canada (see Section 10). Data for the 2015 GSS on Time Use were collected from April 7th 2015 to April 6th 2016. The total sample was divided into six waves of collection of which four were overlapping waves. The first and last waves were CATI only and lasted two months. Waves two, three, four and five were mixed mode and lasting 3 months. At the beginning of a wave, the sample for that wave was sent to the regional offices. Self-completed electronic questionnaire was offered during the first 6 weeks. The remaining 6 weeks of the wave were only CATI interviews. The process for the next wave would start one month prior to the end of the previous wave. This process was repeated four times. Collection for an overlapping wave lasted three months.

Questionnaires

The questionnaire was designed based on research and extensive consultations with key time use partners and data users. Qualitative testing on new content, conducted by Statistics Canada's Questionnaire Design Resource Center (QDRC), was carried out with respondents in four cities, representing three provinces. Questions which worked well and others that needed clarification or redesign were highlighted. QDRC staff compiled a detailed report of the results along with their recommendations. All comments and feedback from qualitative testing were carefully considered and incorporated into the survey. Discussions on how changes would be implemented were taken in consultation with QDRC.

Variables Description

Dataset contains 527 variable(s)

File : GSS29_episode_EN_v2

PUMFID: Record identification

Information	[Type= continuous] [Format=numeric] [Range= 10000-27389] [Missing=*]
Statistics [NW/ W]	[Valid=274108 / 461837622.132] [Invalid=0 / 0] [Mean=18681.385 / 18664.511] [StdDev=5024.502 / 5013.478]
Universe	All respondents
Literal question	Record identification.
Notes	The variable PUMFID is found in the main PUMF file as well as the episode PUMF file of Time Use, cycle 29. This variable serves as the link between these two files. Each case has a unique record identifier and this appears on every episode.

Value	Label	Cases	Percentage
99996	Valid skip		
99997	Don't know		
99998	Refusal		
99999	Not stated		

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

EPINO: Sequential episode number

Information	[Type= continuous] [Format=numeric] [Range= 1-59] [Missing=*]
Statistics [NW/ W]	[Valid=274108 / 461837622.132] [Invalid=0 / 0] [Mean=9.413 / 9.301] [StdDev=6.199 / 6.163]
Universe	All episodes
Literal question	Sequential episode number.

Value	Label	Cases	Percentage
96	Valid skip		
97	Don't know		
98	Refusal		
99	Not stated		

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

WGHT_EPI: Episode weight

Information	[Type= continuous] [Format=numeric] [Range= 9.4188-22707.1987] [Missing=*]
Statistics [NW/ W]	[Valid=274108 /-] [Invalid=0 /-] [Mean=1684.875 /-] [StdDev=1681.731 /-]
Universe	All episodes
Literal question	Episode weight.

Value	Label	Cases	Percentage
99999.9996	Valid skip		
99999.9997	Don't know		
99999.9998	Refusal		
99999.9999	Not stated		

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

DDAY: Diary - Reference day

Information	[Type= continuous] [Format=numeric] [Range= 1-7] [Missing=*]
Statistics [NW/ W]	[Valid=274108 / 461837622.132] [Invalid=0 / 0]
Universe	All respondents
Literal question	Diary - Reference day.
Notes	This variable indicates the day of the week for which the Time Use diary was collected and is found on in the main file as well as the episode file of Time Use, Cycle 29.

File : GSS29_episode_EN_v2

DDAY: Diary - Reference day

Value	Label	Cases	Weighted	Percentage (Weighted)
1	Sunday	39955	63582012.4	13.8%
2	Monday	42428	68266749.5	14.8%
3	Tuesday	44217	68650403.8	14.9%
4	Wednesday	40131	67737596.7	14.7%
5	Thursday	36514	67838544.4	14.7%
6	Friday	34474	64617669.9	14.0%
7	Saturday	36389	61144645.5	13.2%
96	Valid skip	0	0.0	
97	Don't know	0	0.0	
98	Refusal	0	0.0	
99	Not stated	0	0.0	

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

TOTEPISO: Total number of episodes during the reference day

Information	[Type= continuous] [Format=numeric] [Range= 3-59] [Missing=*]
Statistics [NW/ W]	[Valid=274108 / 461837622.132] [Invalid=0 / 0] [Mean=17.825 / 17.602] [StdDev=6.007 / 6.062]
Universe	All episodes
Literal question	Total number of episodes during the reference day.
Notes	This derived variable indicates the total number of episodes the respondent reported for the reference day, including those episodes where there are missing values for location or social contact. This variable is found on both the Main file and the Time Use Episode file.

Value	Label	Cases	Percentage
96	Valid skip		
97	Don't know		
98	Refusal		
99	Not stated		

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

TUI_01: Activity code of the episode

Information	[Type= continuous] [Format=numeric] [Range= 1-95] [Missing=*]
Statistics [NW/ W]	[Valid=274108 / 461837622.132] [Invalid=0 / 0] [Mean=18.86 / 18.233] [StdDev=21.399 / 21.054]
Universe	All episodes
Literal question	What were you doing at [hour:minute]?
Notes	Activities were entered using a 24 hour clock. The list of main activity codes (001-095) can be found in an appendix of the User Guide.

Value	Label	Cases	Percentage
996	Valid skip		
997	Don't know		
998	Refusal		
999	Not stated		

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

STARTIME: Start time of the episode

Information	[Type= discrete] [Format=character] [Missing=*]

File : GSS29_episode_EN_v2

STARTIME: Start time of the episode

Statistics [NW/ W]	[Valid=274108 / 461837622.132] [Invalid=0 / 0]
Universe	All episodes
Literal question	Start time of the episode.
Notes	Hours are determined using a 24-hour clock.

TECHFLAG: Use of Technology Flag

Information	[Type= continuous] [Format=numeric] [Range= 1-2] [Missing=*]
Statistics [NW/ W]	[Valid=274108 / 461837622.132] [Invalid=0 / 0]
Universe	All respondents
Literal question	Use of Technology Flag.
Notes	This derived variable indicates whether or not the respondent used technology during any given episode. Since only respondents whose primary activity did not already imply a use of technology were asked TUI_07 (TUI_01 ne 14,42,62), TECHFLAG is used to indicate the total technology use. Respondents who answered TUI_01 = 14,42,62 OR who responded TUI_07 = 1 are set to yes. Derived from TUI_01 and TUI_07.

Value	Label	Cases	Weighted	Percentage (Weighted)

TUI_10: Subjective well-being scale

Information	[Type= discrete] [Format=character] [Missing=*]
Statistics [NW/ W]	[Valid=274108 / 461837622.132] [Invalid=0 / 0]
Universe	All episodes randomly selected for the subjective well-being scale
Literal question	On a scale of -3 to +3 where -3 means very unpleasant and +3 means very pleasant; at [RandomTime] o'clock, how would you rate the activity you were doing?
Notes	Two times were randomly selected for each respondent who completed the Time Use diary. TUI_10 was triggered when the time range of the current episode included one or both of these times. In most cases TUI_10 was triggered twice. However, in cases where the time range of an episode covered both randomly selected times, the question was only triggered once.
