Overview

Type	General Social Survey
Identification	gss-89M0034-E-2015-c-29-main
Version	Production Date: 2018-07-19 Version 3
Series	The two primary objectives of the General Social Survey (GSS) are: to gather data on social trends in order to monitor changes in the living conditions and well-being of Canadians over time; and to provide information on specific social policy issues of current or emerging interest.

Abstract

The General Social Survey (GSS) gathers data on social trends in order to monitor changes in the living conditions and well-being of Canadians over time, and to provide immediate information on specific social policy issues of current or emerging interest. This survey monitors changes in time use to better understand how Canadians spend and manage their time and what contributes to their well-being and stress. The data collected provides information to all level of governments when making funding decisions, developing priorities and identifying areas of concern for legislation, new policies and programs. Researchers and other users use this information to inform the general Canadian population about the changing nature of time use in Canada such as: o Are we working too many hours and spending too much time commuting? o Do we have flexible work schedules? o Do we have enough time to play sports, participate in leisure activities or volunteer? o Are we spending enough quality time with our children, our families and our friends? o How has the internet and social media affected the way we spend our time? o Are we satisfied with our lives? New elements were introduced to the GSS cycle for 2015. First, the survey frame has changed. Previous GSS cycles on Time Use were conducted as Random Digit Dialling (RDD) surveys and did not include cellular numbers. In 2015,the survey was implemented using the redesigned GSS frame created in 2013, which integrates data from sources of telephone numbers (landline and cellular) available to Statistics Canada and the Address Register (AR). Second, there is a new weighting strategy and bootstrap weights have also been changed from mean bootstrap to standard bootstrap weights.

Kind of Data	Survey data
Unit of Analysis	Individuals

Scope & Coverage

Keywords	Disability, Dwelling, neighbourhood and community, Education, Immigration, Main activity, Perception of time, Religion, Self related health, Self related and main stress, Sexual orientation, Subjective well being, Time use diary, Unpaid work, Work family responsibilities, Work life balance
Topics	Time use
Time Period(s)	2015-2016
Countries	Canada

Geographic Coverage

Canada, Provinces, Census Metropolitan Areas

Universe

The target population for the Cycle 29 GSS included all persons 15 years of age and older in Canada, excluding: 1. Residents of the Yukon, Northwest Territories, and Nunavut; 2. Full-time residents of institutions.

Sampling

Sampling Procedure

In order to carry out sampling, each of the ten provinces was divided into strata (i.e. - geographic areas). Many of the Census Metropolitan Areas (CMAs) were each considered separate strata. This was the case for St. John's, Halifax, Saint John, Montreal, Quebec City, Toronto, Ottawa, Hamilton, Winnipeg, Regina, Saskatoon, Calgary, Edmonton and Vancouver. All CMAs not on this list are located in Quebec, Ontario and British Columbia, with the exception of Moncton. Three more strata were formed by grouping the remaining CMAs (except Moncton) in each of Quebec, Ontario and British Columbia. Finally, the non-CMA areas of each of the ten provinces were also grouped to form ten more strata, for a total of 27 strata. Moncton was added to the non-CMA stratum for New Brunswick.

The survey frame was created using two different components: - Lists of telephone numbers in use (both landline and cellular) available to Statistics Canada from various sources (Telephone companies, Census of population, etc.); - The Address Register (AR): List of all dwellings within the ten provinces. The Address Register (AR) was used to group together all telephone numbers associated with the same valid address. About 87% of telephone numbers available were linked to the AR. The records resulting from this linkage could possess more than one telephone number (grouped by the address). The other 13% of telephone numbers not linked to the AR were also included in the frame and each of them constitutes a single record. The combination of those two components results in the survey frame. The rationale for using all the telephone numbers (linked and not linked) was to ensure a good coverage of all households with telephone numbers. When more than one telephone number was attached to a record, they were sorted by source and by type of telephone number. The first telephone number was considered the best telephone number available to reach the household. Please note that for the remaining sections of this document, the word "record" will refer to the grouping of telephone numbers that consists of our sampling unit on the survey frame.

In each frame, each record was assigned to a stratum within its province. A simple random sample without replacement of records was next selected in each stratum. The frame for GSS was created using several linked sources, such as the Census, administrative data and billing files. Coverage was improved (over coverage and under coverage may still exist) if we compare it to the random digit dialling strategies used in the past. All respondents in the ten provinces were rostered by telephone and interviewed by telephone or self-completed an electronic questionnaire. Households without telephones were therefore excluded from the survey population. Survey estimates were adjusted (weighted) to represent all persons in the target population, including those not covered by the survey frame. For the 2015 GSS on Time Use, 87.4% of the telephone numbers dialled reached eligible households. An attempt was then made to conduct an interview with one randomly selected person from each household. To be eligible, a household had to include at least one person 15 years of age or older. During collection, for the households not meeting the eligibility criteria, the interviews were terminated after an initial set of questions that established whether or not they met the criteria.

The target sample size (i.e. the number of respondents) for Cycle 29 Time Use was 22,000 while the actual number of respondents was 17,390. For each province, minimum sample sizes were determined that would ensure certain estimates would have acceptable sampling variability at the stratum level. Once these stratum sample size targets had been met, the remaining sample was allocated to the strata in a way that balanced the need for precision of both national-level and stratum-level estimates.

Response Rate

The overall response rate was 38.2%. The response rate for the 2015 Cycle 29 GSS on Time Use and that of previous cycles are not directly comparable. The 2015 sample was selected using the new GSS frame, which necessitated some adjustments in the methodology used to calculate the response rate. The new frame includes "cell phone only" households, a population that was not covered with the previous RDD sample frame. Addition of "cell phone only" households to the frame was essential since this population constitutes a constantly growing portion of the population and coverage had been steadily declining with the previous frame. While, the addition of these households is necessary for coverage of the Canadian population, this population is harder to reach. Another factor that affects comparability of the response rate over time is the way in which status (in-scope, out-of-scope) is determined under the new design.

Weighting

When a probability sample is used, as was the case for the GSS, the principle behind estimation is that each person selected in the sample represents (in addition to himself/herself) several other persons not in the sample. For example, in a simple random sample of 2% of the population size of 1000, each person in the sample represents 50 persons in the population (himself/herself and 49 others). The number of persons represented by a given respondent is usually known as the weight or weighting factor of the sampled person. GSS Cycle 29 is a survey of individuals and the analytic files contain questionnaire responses and associated information from the respondents. A weighting factor is available on the microdata file: WGHT_PER: This is the basic weighting factor for analysis at the person level, i.e. to calculate estimates of the number of persons (non-institutionalized and aged 15 or over) having one or several given characteristics. In addition to the estimation weights, bootstrap weights have been created for the purpose of design-based variance estimation. Estimates based on the survey data are also adjusted (by weighting) so that they are representative of the target population with regard to certain characteristics (each month we have independent estimates for various age-sex groups by province). To the extent that the characteristics are correlated with those independent estimates, this adjustment can improve the precision of estimates.

Data Collection

Data Collection Dates	start 2015-04-07 end 2016-04-06
Time Period(s)	start 2015 end 2016
Data Collection Mode	Computer assisted telephone interviewing (CATI) and an electronic questionnaire were used to collect data for the 2015 GSS on Time Use. Respondents were interviewed in the official language of their choice. Proxy interviews were not permitted. All interviewing took place using centralized telephone facilities in five of Statistics Canada's regional offices, with calls being made from approximately 9:00 a.m. to 9:30 p.m. Mondays to Fridays. Interviewing was also scheduled from 10:00 a.m. to 5:00 p.m. on Saturdays and 1:00 p.m. to 9:00 p.m. on Sundays. The five regional offices were: Halifax, Sherbrooke, Sturgeon Falls, Winnipeg and Edmonton. Interviewers were trained by Statistics Canada staff in telephone interviewing techniques using CATI, as well as in survey concepts and procedures. All interviews were consolidated in Sherbrooke and Sturgeon Falls for the last two waves to facilitate collection management. Interviewers were instructed to make all reasonable attempts to obtain a completed interview with the randomly selected member of the household. Those who at first refused to participate were re-contacted up to two more times to explain the importance of the survey and to encourage their participation. For cases in which the timing of the interviewer's call was inconvenient, an appointment was arranged to call back at a more convenient time. For cases in which there was no one home, numerous call backs were made. Interviewer manuals are not included in this documentation package but can be made available by contacting Statistics Canada (see Section 10). Data for the 2015 GSS on Time Use were collected from April 7th 2015 to April 6th 2016. The total sample was divided into six waves of collection of which four were overlapping waves. The first and last waves were CATI only and lasted two months. Waves two, three, four and five were mixed mode and lasting 3 months. At the beginning of a wave, the sample for that wave was sent to the regional offices. Self-completed electronic questionnaire was offered during the first 6 weeks. The remaining 6 weeks of the wave were only CATI interviews. The process for the next wave would start one month prior to the end of the previous wave. This process was repeated four times. Collection for an overlapping wave lasted three months.

Questionnaires
The questionnaire was designed based on research and extensive consultations with key time use partners and data users. Qualitative testing on new content, conducted by Statistics Canada's Questionnaire Design Resource Center (QDRC), was carried out with respondents in four cities, representing three provinces. Questions which worked well and others that needed clarification or redesign were highlighted. QDRC staff compiled a detailed report of the results along with their recommendations. All comments and feedback from qualitative testing were carefully considered and incorporated into the survey. Discussions on how changes would be implemented were taken in consultation with QDRC.

Variables Description

Dataset contains 848 variable(s)

File : GSS29_main_EN_v3

PUMFID: Record identification

Information	[Type= continuous] [Format=numeric] [Range= 10000-27389] [Missing=*]
Statistics [NW/ W]	[Valid=17390 / 29766398.659] [Invalid=0 / 0] [Mean=18694.5 / 18702.606] [StdDev=5020.205 / 5008.038]
Universe	All respondents
Literal question	Record identification
Notes	The variable PUMFID is found in the main PUMF file as well as the episode PUMF file of Time Use, cycle 29. This variable serves as the link between these two files. Each case has a unique record identifier and this appears on every episode.

Value	Label		Cases	Percentage
99996	Valid skip			
99997	Don't know			
99998	Refusal			
99999	Not stated			

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

WGHT_PER: Person weight

Information	[Type= continuous] [Format=numeric] [Range= 10.0188-22707.1987] [Missing=*]
Statistics [NW/ W]	[Valid=17390 /-] [Invalid=0 /-] [Mean=1711.696 /-] [StdDev=1710.753 /-]
Universe	All respondents
Literal question	Person weight
Notes	See User's Guide, section on "Estimation".

Value	Label		Cases	Percentage
99999.9996	Valid skip			
99999.9997	Don't know			
99999.9998	Refusal			
99999.9999	Not stated			

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

SURVMNTH: Survey month of data collection

Information	[Type= discrete] [Format=numeric] [Range= 1-12] [Missing=*]
Statistics [NW/ W]	[Valid=17390 / 29766398.659] [Invalid=0 / 0]
Universe	All respondents
Literal question	Survey month of data collection

Value	Label	Cases	Weighted	Percentage (Weighted)
1	January 2016	1542	2607541.1	8.8%
2	February 2016	2173	3450450.0	11.6%
3	March 2016	1338	2123427.9	7.1%
4	April 2015/2016	1737	2792104.3	9.4%
5	May 2015	1161	2230580.4	7.5%
6	June 2015	1352	2050797.8	6.9%
7	July 2015	1340	2720634.6	9.1%
8	August 2015	1670	3012153.9	10.1%
9	September 2015	1072	1935957.8	6.5%
10	October 2015	1637	2712782.7	9.1%
11	November 2015	954	1648161.5	5.5%
12	December 2015	1414	2481806.6	8.3%

File : GSS29_main_EN_v3

SURVMNTH: Survey month of data collection

Value	Label	Cases	Weighted	Percentage (Weighted)
96	Valid skip	0	0.0	
97	Don't know	0	0.0	
98	Refusal	0	0.0	
99	Not stated	0	0.0	

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

AGEGR10: Age group of respondent (groups of 10)

Information	[Type= discrete] [Format=numeric] [Range= 1-7] [Missing=*]
Statistics [NW/ W]	[Valid=17390 / 29766398.659] [Invalid=0 / 0]
Universe	All respondents
Literal question	Age group of respondent (groups of 10)
Notes	Derived from household roster.

Value	Label	Cases	Weighted	Percentage (Weighted)
1	15 to 24 years	1303	4511131.1	15.2%
2	25 to 34 years	2127	4956385.9	16.7%
3	35 to 44 years	2597	4734506.4	15.9%
4	45 to 54 years	2789	5136124.6	17.3%
5	55 to 64 years	3741	4831305.6	16.2%
6	65 to 74 years	2958	3283969.0	11.0%
7	75 years and over	1875	2312976.0	7.8%
96	Valid skip	0	0.0	
97	Don't know	0	0.0	
98	Refusal	0	0.0	
99	Not stated	0	0.0	

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

SEX: Sex of respondent

Information	[Type= discrete] [Format=numeric] [Range= 1-2] [Missing=*]
Statistics [NW/ W]	[Valid=17390 / 29766398.659] [Invalid=0 / 0]
Universe	All respondents
Literal question	Sex of respondent
Notes	Derived from household roster.

Value	Label	Cases	Weighted	Percentage (Weighted)
1	Male	7739	14689651.7	49.3%
2	Female	9651	15076746.9	50.7%
6	Valid skip	0	0.0	
7	Don't know	0	0.0	
8	Refusal	0	0.0	
9	Not stated	0	0.0	

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

MARSTAT: Marital status of the respondent

Information	[Type= discrete] [Format=numeric] [Range= 1-6] [Missing=*]
Statistics [NW/ W]	[Valid=17390 / 29766398.659] [Invalid=0 / 0]

File : GSS29_main_EN_v3

MARSTAT: Marital status of the respondent

Universe	All respondents
Literal question	Marital status of the respondent
Notes	Derived from household roster and MSNC_Q01.

Value	Label	Cases	Weighted	Percentage (Weighted)	
1	Married	8250	14553577.2		48.9%
2	Living common-law	1676	3290252.5	11.1%	
3	Widowed	1617	1428003.8	4.8%

PHSDFLG: Respondent has a spouse/partner living in the household

Information	[Type= discrete] [Format=numeric] [Range= 1-2] [Missing=*]
Statistics [NW/ W]	[Valid=17390 / 29766398.659] [Invalid=0 / 0]
Universe	All respondents
Literal question	Respondent has a spouse/partner living in the household
Notes	This derived variable identifies respondents who declared having a spouse/partner living in the household at RSR_Q1. In less than 1% of cases, respondents, who reported being widowed, separated, divorced, or single (never married) at MSNC_Q01 or AAA_Q50, later reported that someone in the household was their husband/wife (RSR_Q1 = 01) or common-law partner (RSR_Q1=02). For these cases, there is information for a spouse/partner at PHSDFLAG, although the respondent's marital status (MARSTAT) is not married or common-law. Derived from household roster and RSR_Q1.

Value	Label	Cases	Weighted	Percentage (Weighted)	
1	Yes	9525	17355569.9		58.3%

DURS200: Duration - Social contact - Alone

Information	[Type= discrete] [Format=numeric] [Range= 0-1440] [Missing=*]
Statistics [NW/ W]	[Valid=17390 / 29766398.659] [Invalid=0 / 0]
Universe	All respondents
Literal question	Duration - Social contact - Alone
Notes	This derived variable indicates the total duration (in minutes) for social contact - Alone, as reported in TUI_Q06 (found in the episode file). Social contact does not refer to a main activity code.

9999	Not stated	0	0.0	

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

DURS207: Duration - Social contact - Friend(s)

Information	[Type= discrete] [Format=numeric] [Range= 0-1440] [Missing=*]
Statistics [NW/ W]	[Valid=17390 / 29766398.659] [Invalid=0 / 0]
Universe	All respondents
Literal question	Duration - Social contact - Friend(s)
Notes	This derived variable indicates the total duration (in minutes) for social contact with friend(s),), as reported in TUI_Q06(found in the episode file). Social contact does not refer to a main activity code.

DURS208: Duration - Social contact - Colleague(s)/classmate(s)

Information	[Type= discrete] [Format=numeric] [Range= 0-1430] [Missing=*]
Statistics [NW/ W]	[Valid=17390 / 29766398.659] [Invalid=0 / 0]
Universe	All respondents
Literal question	Duration - Social contact - Colleague(s)/classmate(s)
Notes	This derived variable indicates the total duration (in minutes) for social contact with colleague(s) or classmate(s),), as reported in TUI_Q06(found in the episode file). Social contact does not refer to a main activity code.

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

DURL301: Duration - At place of work or school

Information	[Type= discrete] [Format=numeric] [Range= 0-1440] [Missing=*]
Statistics [NW/ W]	[Valid=17390 / 29766398.659] [Invalid=0 / 0]
Universe	All respondents
Literal question	Duration - At place of work or school
Notes	This derived variable indicates the total duration (in minutes) - At place of work or school, as reported in the location code (found in the episode file).

NOC1110Y: NOC 2011 (10 categories) - Last year

Information	[Type= discrete] [Format=numeric] [Range= 1-95] [Missing=*]
Statistics [NW/ W]	[Valid=10582 / 20194559.443] [Invalid=6808 / 9571839.216]
Universe	MRW_D40A = 1
Literal question	NOC 2011 (10 categories) - Last year.
Notes	This derived variable indicates the occupation group that an employed or self-employed person belongs to, based on the first digit of the National Occupational Classification (NOC) 2011. Derived from MRW_D40A, WLY_Q130, WLY_Q140 and NOC 2011. Respondents were asked what their work or occupation was, and what their main activities were in their type of work. With this information, the 4-digit NOC code for 2011 was determined. The National Occupational Classification (NOC) 2011 updates both the National Occupational Classification 2006 of Human Resources and Skills Development Canada and Statistics Canada's National Occupational Classification for Statistics (NOC-S) 2006. This revised edition eliminates the differences between the two former systems. The first use of the NOC 2011 was in the 2011 National Household Survey. Some response categories were abbreviated due to space restrictions. Full text is as follows: 05 Occupations in education, law and social, community and government services 08 Trades, transport and equipment operators and related occupations 09 Natural resources, agriculture and related production occupations

NOC1110W: NOC 2011 (10 categories) - Last week

Information	[Type= discrete] [Format=numeric] [Range= 1-95] [Missing=*]
Statistics [NW/ W]	[Valid=7969 / 14849193.226] [Invalid=9421 / 14917205.433]
Universe	MRW_D40B = 1
Literal question	NOC 2011 (10 categories) - Last week
Notes	This derived variable indicates the occupation group that an employed or self-employed person belongs to, based on the first digit of the National Occupational Classification (NOC) 2011. Derived from MRW_D40B, WLY_Q145, WLW_Q130, WLW_Q140 and NOC 2011. Respondents were asked what their work or occupation was, and what their main activities were in their type of work. With this information, the 4-digit NOC code for 2011 was determined. The National Occupational Classification (NOC) 2011 updates both the National Occupational Classification 2006 of Human Resources and Skills Development Canada and Statistics Canada's National Occupational Classification for Statistics (NOC-S) 2006. This revised edition eliminates the differences between the two former systems. The first use of the NOC 2011 was in the 2011 National Household Survey. Some response categories were abbreviated due to space restrictions. Full text is as follows: 05 Occupations in education, law and social, community and government services 08 Trades, transport and equipment operators and related occupations 09 Natural resources, agriculture and related production occupations

Universe	MRW_D40B = 1
Literal question	NAICS 2012 (20 categories) - Last week
Notes	This derived variable indicates the type of industry, business, or service that an employed or self-employed person's work is classified in, according to the first two digits of the North American Industry Classification System (NAICS) 2012. Derived from MRW_D40B, WLY_Q145, WLW_Q110, WLW_Q120 and NAICS 2012. Respondents were asked what kind of business they worked for. With this information, the NAICS code for 2012 was determined. NAICS is a common industry classification system developed between Canada, the United States, and Mexico. The three countries collaborate to revise the system every five years in order to keep it current with changes in economic activities. Some response categories were abbreviated due to space restrictions. Full text is as follows: 14 Administrative and support, waste management and remediation services

LANHOME: Language spoken most often at home - Collapsed

Information	[Type= discrete] [Format=numeric] [Range= 1-8] [Missing=*]
Statistics [NW/ W]	[Valid=16688 / 28419774.414] [Invalid=702 / 1346624.245]
Universe	All respondents
Literal question	Language spoken most often at home - Collapsed
Notes	This derived variable is the collapsed classification of language spoken most often at home. LANHOME replaces LANHSD. The main difference is the addition of a new "Multiple non-official languages" category (08). Language spoken most often at home refers to the language the person speaks most often at home at the time of data collection. A person can report more than one language as "spoken most often at home" if the languages are spoken equally often. For a person who lives alone, the language spoken most often at home is the language in which he or she feels most comfortable. Derived from LAN_B02 (LLU_Q01/S01) ***Harmonized content***

Value	Label	Cases	Weighted	Percentage (Weighted)

LANMT: Mother Tongue - Collapsed

Information	[Type= discrete] [Format=numeric] [Range= 1-8] [Missing=*]
Statistics [NW/ W]	[Valid=16946 / 28884519.709] [Invalid=444 / 881878.95]
Universe	All respondents
Literal question	Mother Tongue - Collapsed
Notes	This derived variable is the collapsed classification of mother tongue. Derived from LAN_B03 (LLU_Q01/S01). Mother tongue refers to the first language learned at home in childhood and still understood by the person at the time the data was collected. If the person no longer understands the first language learned, the mother tongue is the second language learned. For a person who learned two languages at the same time in early childhood, the mother tongue is the language this person spoke most often at home before starting school. The person has two mother tongues only if the two languages were used equally often and are still understood by the person. LANMT metadata, including answer categories, are consistent with the departmental standard for the collapsed classification of mother tongue of person. LANMT replaces LANCHSUE, LANCHSUF, LANCHSUO. ***Harmonized content***
